Negative test case:

TestId: TC_US_BASK_3_N

Title: Network issue during removing item from the basket

Component: Basket

Owner: Peter Csapo

Created At: 18.08.2026.

Test type: Regression

Details:

PreConditions: site is available

PostConditions: -

#	Steps	Expected
1	Open site	
2	Add two different item to the basket with discount	"Saving \$<saving amount> <Basket icon> 2" is displayed on the basket button in the header
3	Click on basket button	both items and the calculated total discounted price are displayed
4	Turn off the network in developar toolbar network tab switch No throttling to Offline	
5	Remove all items from the basket	items removed but the network tab shows error happened during the calls with "Provisional headers are shown"
6	Turn back the network in developar toolbar network tab to No throttling	
7	Close the basket	same "Saving \$<saving amount> <Basket icon> 2" should be displayed as before deleting items because the items are stored on the server side
8	Click on basket button	both items and the calculated total discounted price are displayed

Bug report

Title:

Tags: #Basket #HeaderNav

Priority: P2

Severity: S3

Open Date: 18.08.20026

Description:

Environment: production

Site: aldi.us

Device OS: windows

Browser: chrome

App version: 151.0

Preconditions>

- the site is up and available

Steps:

- opening the site
- add different items to the basket
- opening the basket
- opening the network tab on the browser developer tool bar and turn off the network
- removing all the items from the basket
- turn on the network in the developer toolbar
- close the basket

Actual result:

- the discount is showed on the on the floating-cart-button, but the count of different items is 0

Note: after page refresh or adding a new item to the basket the items count displayed again the value was stayed in the basket before network issue.

However the basket reopen does not resolve the issue

Expected result:

- it should show also price and different items count too
